Why we are an ESG facing company

We believe that to have a best in class product in 2026 you must have ESG principles in your metrics. Our products value proposition is they are made from something the world currently doesn't value and we transmute them into the best product in their class with design, strength, value, sustainability, transparency and sovereign manufacturing standards.

Why we use EPDs

An EPD is one of the tools that give our products transparency, sustainability credentials and Scope 3 data for our Customers.

Resin8

Net Zero Aggregate

- Recycled. Engineered. Proven.
- International Accreditation EPD
- 90% recycled material
- The IP cuts down the pathways to micro plastics and leaching
- Recycleable as clean aggregate
-

What is Resin8?

RESIN8® is a lightweight hybrid mineral-polymer aggregate made from ~90% recycled materials, designed to replace traditional aggregates in concrete and asphalt. RESIN8 can be recycled infinitely.

Turning waste plastic into high-performance construction materials.
